## FAIRMOUNT-STURTEVANT TORQUE WRENCHES

### SENSORY SIGNALLING MODEL

The "S" model Torque wrenches are equipped with the patented Sensory signaling mechanism which functions entirely independent of the measuring element. The Sensory mechanism (1st) sounds a distinct CLICK, (2nd) imparts a strong, definite IMPULSE to the hand the instant the pre-set (desired) Torque is applied and (3rd) may be read by SIGHT. The Torque may be easily seen as the pointer indicates the Torque being applied on a legible scale that is readable from all working angles. Thus, through three (3) senses, SIGHT, SOUND and FEEL, or through any one of the Sensory impulses, the operator automatically releases his pull on the Torque wrench.

**THE SENSORY SIGNALING MECHANISM** is independent from the measuring element.

**DIRECT READING SCALE** permits on-the-job re-check of the pre-set Torque.

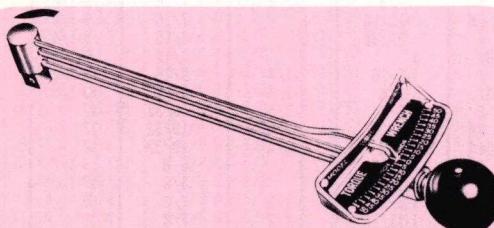

**PIVOTED HANDLE** permits accurate and correct Torque control when Torque wrench is used with adapters and extensions.
